

INGENIX[®]

Provider360™ Best Address Locator

Benefits

- Identify the “best address” for your providers—to use for mailings and correspondence
- Eliminate duplicate mailings
- Reduce returned mail rates substantially
- Build stronger provider relations

Leverage our data. Lower your costs.

If you are struggling with high rates of returned mail or increasing postage and mailing costs due to multiple mailings to the same provider, the Ingenix Provider Best Address Locator offers you a solution.

You should see an immediate reduction in costs associated with returned mail and duplicate provider mailings.

We have identified the best place to find your providers.

Ingenix has built the largest referential database of physicians, dentists, and allied professionals available in the United States today. And, our sophisticated data management processes, combined with our extensive outreach provider verification activities, allow us to pinpoint not only the right set of addresses for any given provider, but the specific “best” address for mailings and other correspondence with that provider.

We know, through our extensive experience in tracking providers and their locations, that there are approximately 2.3 locations for every provider in the United States today. Yet, many health plans have provider databases with 2, 3, or even 4 times as many for any given provider as a result of duplicate addresses and outdated locations. A larger number of addresses drive increased postage costs, and outdated or undeliverable addresses lead to excessive returned mail handling.

Yet these challenges are easily solved. We'll provide the best address for each of your providers by processing your provider list through our analytics engine and leveraging our comprehensive database. You'll be returned a single address for each of your providers that we have identified as the best address to use for mailings.

Key Features ↙

- **Delivery options:**
 - Extract file with provider name, best address, and defined crosswalk data elements
 - Your provider file (all addresses) returned with Best Address flag set
- **Best address includes key identified fields:**
