

INGENIX[®]

Workers Compensation eBilling

Automated functions eliminate manual processes, reduce cycle times, and improve auto-adjudication rates.

Executive Summary

Ingenix offers an end-to-end eBilling solution designed to provide direct connectivity and integrated bill editing to health care providers, payers, and state workers' compensation program administrators. Ingenix eBilling can help you:

- Reduce cycle times and high costs involved in manual mail screening and processing
- Increase the efficiency and value of thousands of information exchanges per day
- Accurately process and index electronic attachments from multiple submission formats

Overview

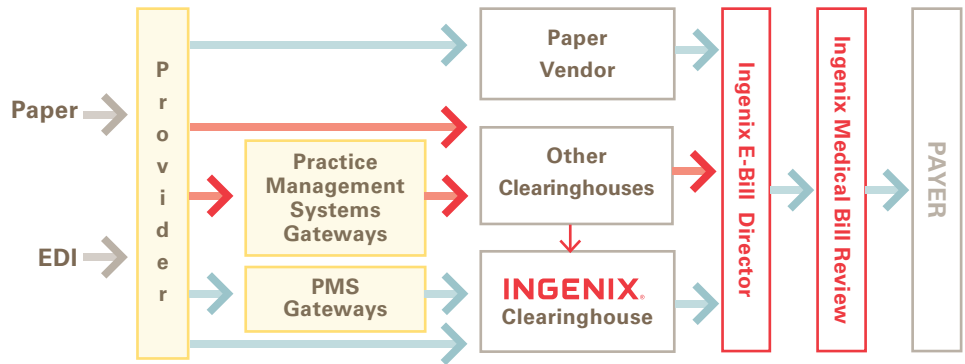

Ingenix offers a comprehensive solution that includes electronic data interchange (EDI) connectivity and eBilling compliance with state mandates, as well as efficient claim processing and electronic payment. This solution will help provide information access and exchange critical financial and clinical data in real-time, directly and in batches, through secure transaction gateways and portals.

Comprehensive, Integrated Connectivity Options

We provide direct connections to most trading partners and can help you outsource connections to providers or their clearinghouses if appropriate. Our eBilling solution enables universal connectivity between providers, payers, and state jurisdictions. All state requirements for EDI reporting can be accomplished through a single connection point. When combined with other Ingenix solutions, you can rely on one vendor to provide best-in-class solutions that provide your business with the flexibility it needs to grow. Ingenix also offers electronic funds transfer (EFT) and bill payment capabilities from OptumHealthSM Financial Services—making the offering a truly integrated solution from initial data submission to payment and back-end reporting.

Interoperability

Ingenix is reinventing the clearinghouse to go beyond connectivity to interoperability. We edit incoming electronic medical bills to check that all required data is provided, accurate, and consistent. Edited results are communicated electronically to providers and payers. By standardizing disparate and/or inconsistent data, it is easier to process the information and reduces cycle times.

Vendor Simplification

Payers and providers building an EDI platform are finding that it's difficult and time-consuming to establish and manage interfaces between multiple vendors and state organizations. By choosing a single vendor for all their EDI requirements, they can achieve cost reductions that grow in direct proportion to transaction volumes. And when that single vendor is Ingenix, they can simplify, integrate, and save on their full range of coding and billing needs.

Key Features

We provide a connectivity solution that features:

- **HIPAA- and state-mandated transaction capability, regardless of legacy claims, bill adjudication, or network re-pricing capabilities and requirements**
- **Single-source outsourcing of front-end connectivity**
- **Marketing program that encourage more EDI adoption by small providers**
- **Ability to connect to more than 300,000 providers**
- **Increases compliance with state EDI mandates**

Benefits

With our recent integration of EDI and eCommerce capabilities with Ingenix coding, editing, claims, and health care transaction management technology, we now provide payers and providers with a single source for all their coding, editing, billing, and reporting needs. The Ingenix eBilling solution gives payers and providers a solid foundation for implementing integrated EDI today.
